

ProfitTool Business Management System

UPS WorldShip Integration

A White Paper on the Key Functions

A New Level of Productivity

Affordable. Scalable. Customizable.

ProfitTool – UPS Integration

General Data Systems has developed the ProfitTool – UPS WorldShip utilities as part of an overall suite of utilities that encompass the ProfitTool Business Management System. This White Paper addresses the UPS WorldShip integration aspects of ProfitTool.

The ProfitTool Sales Order/Invoicing Entry Module has been enhanced with additional software logic to provide for integration to the UPS WorldShip manifesting software both for sending sales order shipping information to WorldShip and collecting freight charge and tracking data, which can be imported into the ProfitTool invoicing utilities.

Sales Order/Invoicing System Settings

The ProfitTool Sales Order System Options provides for the following UPS WorldShip settings:

A system path to the network PC file UPS WorldShip will create.

A flag setting, which instructs ProfitTool to collect the UPS Tracker Number from WorldShip and incorporate it into the invoice transaction.

A flag setting, which instructs ProfitTool to collect the freight charges from WorldShip and incorporate them into the invoice transaction.

A New Level of Productivity

Affordable. Scalable. Customizable.

As part of the ProfitTool/UPS WorldShip Integration, General Data System's technicians will insure that the WorldShip software is properly configured to insure a seamless exchange on information between ProfitTool and WorldShip.

Sales Order/Invoicing System Operations

Once GDS has configured both ProfitTool and WorldShip, the seamless operation between these applications happens without any additional operations.

All applicable shipping information entered into ProfitTool as part of the sales orders process, will be automatically available to WorldShip when the sales order is being manifested for shipment. Specifically, the sales order number is entered into WorldShip, which will then access the shipping information from ProfitTool.

As the shipment is being processed through WorldShip, it will deliver back to ProfitTool the appropriate Tracking Number and Freight Charges associated with each sales order. When that sales order is processed through ProfitTool's invoicing programs, the Tracking Information and applicable freight charges are automatically added to the transaction.

Wrap Up

All wholesalers and distributors that utilize the UPS WorldShip manifesting system can benefit greatly through the implementation of this enhancement. This enhancement eliminates the need to manually enter Tracking Numbers and Freight Charges. More importantly, with ProfitTool's faxing and/or e-mailing business document system, your level of customer service will automatically elevate by providing immediate information as to what has shipped, and the associated tracking information.

Thank you for taking your time to review this material. The experienced staff at GDS would be more than pleased to discuss your specific manifesting system requirements and the associated customer freight charges considerations and work with you in bringing about an improved and enhanced solution.
